Klarrow

Evidence-reconciliation workbench

RUN 4 - CONTROLLED SYNTHETIC SCENARIO

Evidence reconciliation for food-traceability investigations

Klarrow helps an operator assemble and challenge fragmented supplier, production and dispatch records - with source grounding, human decisions and explicit uncertainty.

15	35	4	8
AI rows	parser rows	value-in-quote	identifier-only

WHAT IT DOES

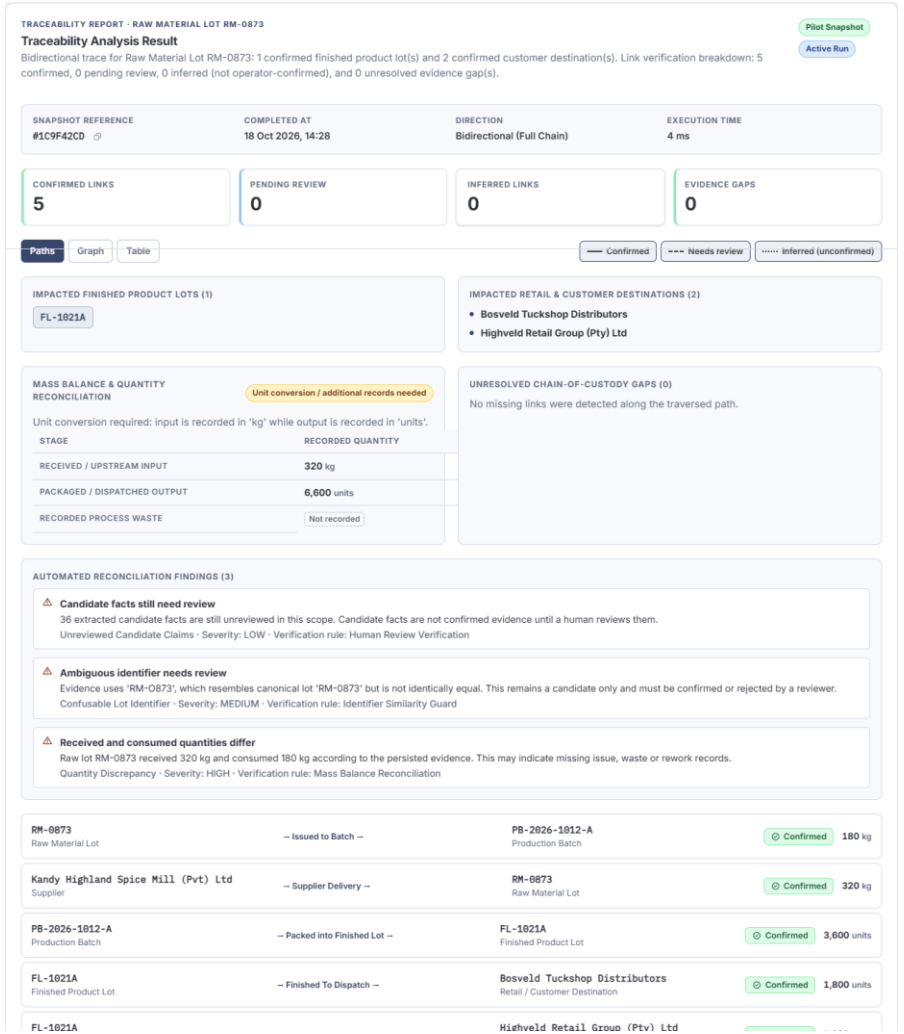

- Ingests supported text, CSV/TSV, Excel, EML, logs and text-selectable PDF.

- Uses local Meta Llama 3.2 3B to propose candidate facts; deterministic code handles structured parsing and traversal; a three-scenario evaluation suite passes all locked checks in deterministic mode.

- Keeps value-in-quote, adjacent-line context, identifier-only and unlocated claims distinct; humans confirm relationships.

- Separates confirmed scope from possible exposure and records findings, caveats and audit history.

Not a recall decision system. Not certified. Not production-ready. The Run 4 demo is one authored scenario; accuracy, time savings and customer demand remain unmeasured.

Trace snapshot - confirmed scope, unresolved gaps, insufficient mass balance
